

Keyword Research Project

Introduction

Keyword research is an important part of developing an effective digital marketing and SEO strategy. This project focuses on identifying **relevant and high-potential keywords** for the topic **“How AI Is Changing Digital Marketing in 2026.”** The process includes selecting root keywords, using **Google Keyword Planner** to generate keyword ideas, cleaning and filtering the data, and finally selecting **20–25 relevant keywords** based on search volume and topic relevance. These keywords can be used strategically in **blogs, articles, and other digital content**.

1. Topic Selection

The selected topic is “How AI Is Changing Digital Marketing in 2026.” It combines the high-interest areas of AI and digital marketing, targets informational search intent, and offers opportunities to cover trends such as AI SEO, content creation, automation, advertising, and analytics.

Best Topic

“How AI Is Changing Digital Marketing in 2026: 10 Trends Every Marketer Should Know”

Why this is strong:

- Combines two high-interest topics: AI + Digital Marketing
- Targets informational search intent
- Gives you opportunities to cover AI SEO, AI content creation, AI advertising, personalization, automation, AEO/GEO, and analytics
- Works well for beginners as well as marketing professionals

2. Root Keyword Research

After selecting the topic, **broad root keywords related to the main topic** were identified. These keywords form the foundation for further keyword research and help discover more specific keyword variations.

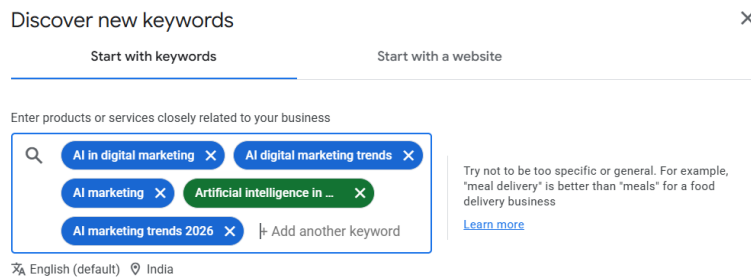

Examples include:

- AI in Digital Marketing
- AI Marketing
- AI Digital Marketing
- Artificial Intelligence in Marketing
- AI Marketing Trends

1. AI in digital marketing
2. AI digital marketing trends
3. AI marketing
4. Artificial intelligence in marketing
5. AI marketing trends 2026

3. Keyword Planner

The identified root keywords were then entered into **Google Keyword Planner** to discover relevant keyword ideas and analyze their search potential.

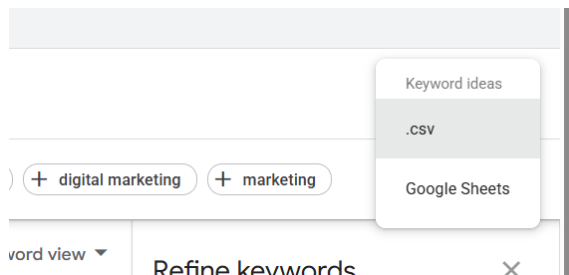

4. Keyword Ideas

Google Keyword Planner was used to generate **related keyword ideas** from the root keywords. The results provide additional keywords along with metrics such as **average monthly searches and competition**, which can be used for further keyword selection and analysis.

Keyword (by relevance)	Avg. monthly searches	Three month change	YoY change	Competition	Ad impression share	Top of page bid (low range)	Top of page bid (high range)	Account status
ai in digital marketing	1K - 10K	0%	0%	Low	—	₹31.10	₹184.31	
ai digital marketing trends	10 - 100	0%	-100%	—	—	—	—	
ai marketing	1K - 10K	0%	0%	Medium	—	₹28.76	₹151.59	
ai for market...	1K - 10K	0%	0%	Medium	—	₹43.31	₹182.56	

5. Exporting Keywords

The selected keyword ideas were then **downloaded from Google Keyword Planner in CSV format** for further analysis and filtering.

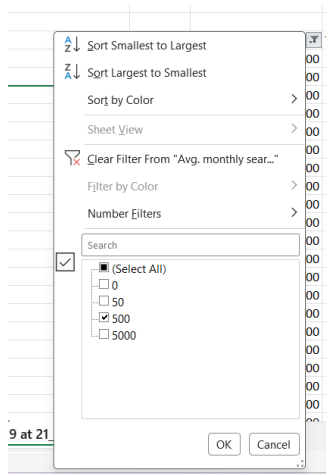

6. Data Cleaning

The exported keyword data was then **cleaned and organized** by removing irrelevant or duplicate keywords and standardizing the data for accurate analysis. This helps ensure that only **relevant, useful, and reliable keywords** are considered for the final selection.

ai for small INR		50	0%	0%	Low	7	93.28	185.82

7. Keyword Filtering

Next, **filters were applied to the cleaned keyword data** based on factors such as **search volume, competition, and relevance**. This helped narrow down the list to the most suitable keywords for the project.

8. Keyword Selection

Keywords were selected based on their **average monthly searches**, while ensuring they remained **relevant to the main topic and brand**. This helped identify keywords with strong search demand that closely matched the project's focus.

Keyword	Current	Avg. monthly search	Three month chan	YoY chan	Competit	Competition (indexed valu	Top

ai for small business marketing	INR	50	0%	0%	Low	7	

9. Final Keyword Selection

After filtering, **20–25 relevant keywords** were selected based on search volume and topic relevance. These keywords can then be naturally incorporated into **blogs, articles, and other content** to support the content strategy.

[illegible]

Conclusion

This project demonstrates a systematic approach to **keyword research**, from identifying root keywords to filtering and selecting the most relevant terms. The final 20–25 keywords can be effectively used in **blogs, articles, and other digital content** to support SEO and reach the target audience.
